

HIRING PROCESS ANALYTICS

PROJECT DESCRIPTION

In this data analysis project, the objective is to **analyze the hiring process data** of a multinational company and draw meaningful insights from it. As a data analyst at this company, the task is to **understand key trends and patterns** in the hiring process to provide valuable recommendations for improving the hiring department's efficiency and decision-making.

APPROACH

The analysis will follow a systematic approach to ensure accuracy and reliability.

- The first step involves data cleaning, handling missing values, and addressing outliers.
- Next, descriptive statistics and visualizations will be generated to gain insights into the hiring process's various aspects, such as gender diversity, salary structure, departmental distribution, and position tiers.

TECH-STACK USED

MS EXCEL(Microsoft 365 version)

DATA QUALITY CONCERNS

- There are 54 duplicate application IDs.
- There is one post in the Post name that is not defined(application ID – 289907).
- There are 15 people who haven't defined(Don't want to say not included) their gender.
- There are 3 people who are earning more than 2 lakhs, but the average is nearly 50k.

Position Tier Analysis

INSIGHTS

Hiring Analysis

There were 7168 applications, out of which 4697 were hired and the remaining ones were rejected. Among the 4697 who got hired, 1856 were female candidates while 2563 were male candidates.

INSIGHTS

Salary Analysis

According to the dataset provided the average salary offered by the company is **Rs 49983.03**.

INSIGHTS

Salary Distribution

I have distributed the candidate who has been hired by the company based on class interval. After distribution, I found that only 3 candidates have been offered more than 1 lac.

INSIGHTS

Departmental Analysis

Out of the 9 departments, only 2 have the highest number of employees working in them and the rest of the 7 departments have less than 11% of the total candidates hired by the company.

INSIGHTS

Position Tier Analysis

I've created some graphs that showcase the average salary offered to each tier in the different departments. As you know, each department has its own priorities, and the salary is based on that. In total, there are nine departments, and I've created 9 bar charts to represent the position of each tier in a department.
